Bartle Answers | Measure (Mathematics) | Integral

Measure and Integration is a daunting subject for mathematical neophytes. Bartle's little volume is the right place to start. I first learned measure theory from it 20 years ago and went on to study functional analysis and stochastic approximation. I was able to master the material on my own with this book.

Chapter 1 Measure on a σ -Algebra of Sets 1. Limits of sequences of sets Definition 1 Let $(A_n)_{n \in \mathbb{N}}$ be a sequence of subsets of a set X . (a) We say that (A_n) is increasing if $A_n \subseteq A_{n+1}$ for all $n \in \mathbb{N}$, and decreasing if $A_n \supseteq A_{n+1}$ for all $n \in \mathbb{N}$. (b) For an increasing sequence (A_n) , we define $\lim_{n \rightarrow \infty} A_n := \bigcup_{n=1}^{\infty} A_n$. For a decreasing sequence (A_n) , we define $\lim_{n \rightarrow \infty} A_n := \bigcap_{n=1}^{\infty} A_n$.

1.40, p.18-19). We construct a measure for an infinitely often repeated random experiment with finitely many possible outcomes (Product measure, Bernoulli measure). Let S be the set of possible outcomes. For $s \in S$, let $p_s > 0$ be the probability that s occurs. Hence $\sum_{s \in S} p_s = 1$. For a fixed realization of the repeated experiment, let $z = (z_n)_{n \in \mathbb{N}}$.

The theory of Lebesgue measure from the integral is then developed, and the author makes a connection with some of the traditional approaches to the Lebesgue integral. 5/28/2015: So far: A very rigorous text! However, I would refer to other sources (lecture videos, notes, etc.) to grasp a better initial understanding on measure theory itself, and a rather reasonable comparison of Riemann vs. Lebesgue integrals.
