A relay is an electromagnetic switch that is used to turn on and turn off a circuit by a low power signal, or where several circuits must be controlled by one signal. We know that most of the high end industrial application devices have relays for their effective working.

Relays detect and locate faults by measuring electrical quantities in the power system which are different during normal and intolerable conditions. The most important role of protective relaying is to first protect individuals, and second to protect equipment. In the second case, their task is to minimize the damage and expense caused by
