Creator - a handy tool that lets you collate several pages, organize them, and export them together (again, in PDF format). It's a nice feature that enables you to customize your reading material, but it's a bit of a hassle, and is really designed for readers who want printouts. The easiest way to read Wikibooks is simply to open them in your web browser.

Buick V6 Engine

The Buick V6, popularly referred to as the 3800, originally 198 cu in (3.2 L) and initially marketed as Fireball at its introduction in 1962, was a large V6 engine used by General Motors. The block is made of cast iron and all use two-valve-per-cylinder iron heads, actuated by pushrods.

The Buick V6 started its production life in the 1962 Buick Special. It was a 90 degree engine and its first displacement was 198 CID. It was dubbed the "Fireball". Buick had worked with the innovative 215 aluminum block V8 (later to be an Olds, then ultimately a Rover engine), but it was difficult to build and had its quirks.

Cut-Down Engine of the Week: Buick V6 - Autoweek

Once upon a time, in a decade long ago, Buick built a kick-ass little turbocharged V6 engine and dropped it into the handsome rear-wheel drive Regal. Rated at (wink, wink) 245 horsepower (in 1987),...

Buick Turbo V6 Engine Build Overview - GM High-Tech ...

In 1959, the GMC V6 engine was introduced in the form of a 60-degree 305 cu in (5 L) petrol engine used in pickup trucks and carryalls. The Buick V6 engine was introduced in 1962 and was based on Buick's contemporary V8 engine. It therefore used a 90-degree V-angle and uneven firing order, resulting in high vibrations.

The original 322 CID, 172 hp V8 that arrived in 1953 set the pattern for all the Buick Nailhead V8 engines to follow through 1966. With its 4.00-in. bore and 3.20-in. stroke, the layout thoroughly embraced GM's latest short-stroke theories, while generous 4.75-in. bore spacing left plenty of room for future displacement increases up to 425 CID.
