Johnson is the acknowledged dean of Canine Theriogenology, and this is her classic tome on the subject. Written in 2001, it is becoming a tiny bit dated, but is still without doubt the definitive book on the subject, and any reproductive practitioner would find their library lacking without this reference.

Canine and feline theriogenology (Book, 2001) [WorldCat.org]

Abstract. Although the interval from birth to weaning is brief for dogs and cats, it is a very intensive period of adjustment to the extrauterine environment and preparation for the relatively greater independence of post-weaning. This rapid progression of events is preceded by critical developmental transitions, including organogenesis and parturition, and it is characterized by postparturient transitions that include the 3-4d neonatal period, the 21-28 maturation, and weaning itself.
