XP1000E Gasoline Powered Generator

Fuel tank - The fuel tank in a hybrid is the energy storage device for the gasoline engine. Gasoline has a much higher energy density than batteries do. For example, it takes about 1,000 pounds of batteries to store as much energy as 1 gallon (7 pounds) of gasoline. Electric motor - The electric motor on a hybrid car is very sophisticated ...

Gasoline-electric Hybrid Structure | HowStuffWorks

Acquire an engine. The required engine size is dependent on the amount of power that the generator will need to supply. A good rule of thumb for a useful, compact generator is to choose an engine in the range of 5 to 10 horsepower. Note that most engines rate their horsepower at a speed of 3,600 rotations per minute (RPM).

Heated returns from generators The diesel engines that powers modern generators are built with an integral onboard fuel pump. This pump will draw fuel from the day tank or fuel supply header and deliver it to the fuel injectors at the correct pressure. This pump moves more fuel than the generator will consume at any given load.

An Engineering Guide to Modern Fuel Systems

Why would a generator manufacturer put a gasoline powered engine on an emergency backup generator? (1) Cheaper for them to buy. (2) Less expensive to install. (3) The most popular fuel. (4) Most people are not educated to the fact that an engine can be run on alternative fuel.
