Understanding Interest Rate Swaps | PIMCO

In finance, an interest rate swap (IRS) is an interest rate derivative (IRD). It involves exchange of interest rates between two parties. In particular it is a "linear" IRD and one of the most liquid, benchmark products. It has associations with forward rate agreements (FRAs), and with zero coupon swaps (ZCSs).

Interest rate swap - Wikipedia

How Interest Rate Swaps Work. Generally, the two parties in an interest rate swap are trading a fixed-rate and variable-interest rate. For example, one company may have a bond that pays the London Interbank Offered Rate (LIBOR), while the other party holds a bond that provides a fixed payment of 5%. If the LIBOR is expected to stay around 3%, then the contract would likely explain that the party paying the varying interest rate will pay LIBOR plus 2%.
