combustion chamber in the presence of a suitable oxidiser (air, most often). The resultant rise in temperature and pressure from the combustion causes the movement of a specific part of the engine, the piston for example. This book, Internal Combustion Engines, gives the fundamental concepts and the specifics of various engine designs.

of carbonaceous fuel. The main derivatives of the process are carbon dioxide CO_2 , water and some soot—also called particulate matter (PM). The effects of inhaling particulate matter have been studied in humans and animals and include asthma, lung cancer, cardiovascular issues, and premature death.
