In general terms, supercritical fluids have properties between those of a gas and a liquid. The critical properties of some substances used as solvents and as supercritical fluids are shown in Table 1. Table 2 shows density, diffusivity, and viscosity for typical liquids, gases, and supercritical fluids. Critical Properties of

Another variation is the solution-enhanced dispersion by supercritical fluids. In this process, the supercritical fluid is first mixed with the solution and it is the mixture that is subsequently sprayed into a vessel controlled at the operating temperature and pressure and where particle formation takes place.

Background. In the past twenty years, supercritical fluid extraction technology has attracted considerable attention from researchers for its potential applications as an environmentally-friendly solvent for chemical processing, see Kiran and Levelt (1994) and McHugh and Krukonis (1994).
