The manager is software that receives the traps and that provides a mechanism to SET or GET SNMP objects from the network device. To receive autonomous traps, the manager runs an application that listens on the TCP/IP SNMP trap port (port 162). SNMP SETs and GETs use port 161. This application is typically called a Trapd, or trap daemon.

About SNMP

SNMP Version 1 (SNMPv1) is the initial version of the SNMP protocol.It's defined in RFC 1157 and is a historical IETF standard. SNMPv1's security is based on communities, which are nothing more than passwords: plain-text strings that allow any SNMP-based application that knows the strings to gain access to a device's management information.
